PROFILE

Full-stack software developer who builds business software end to end: the database and its rules, the web app people use every day, and the integrations that tie it to the rest of the business. In-house developer at Rev 22 Global Energia, where I built and run the company's operations platform on React, TypeScript and Supabase (PostgreSQL). Previously at Onify Tech in Bangkok, shipping C#/.NET APIs, Next.js tools and Android and iOS releases. Bachelor of IT with Distinction from James Cook University. I use AI coding tools such as Claude Code every day, and I test and review everything I ship.

EXPERIENCE

Software Developer Intern *Jul 2026 – Present*

Rev 22 Global Energia · Singapore

In-house developer for a Singapore health and wellness company with retail stores, therapy services, events and online sales.

- Built the inventory, point-of-sale and invoicing web app (React, TypeScript, Vite, Supabase/PostgreSQL) that owners and store staff use daily: invoices and payments, credit and voucher packages, therapy sessions, refunds and exchanges, stock transfers between stores, warehouse and van, rentals with late fees, promotions and reports.
- Wrote the business logic as PostgreSQL functions and triggers with row-level security and Owner/Manager/Staff roles, shipped through 400+ versioned migrations and covered by automated database and browser tests.
- Built staff and affiliate commission tracking, an affiliate portal with referral links, and an audit log of changes.
- Integrated TikTok Shop orders and payouts (with a Xero export), cal.com bookings, HitPay payments and Google Sheets through Supabase Edge Functions and webhooks.
- Built the company's event websites on Vercel; ticket orders and registrations flow into the platform's Events module with guest lists, early-bird pricing and door sales.
- Automated follow-up for TikTok ad leads (Google Sheets, Pabbly Connect, WhatsApp reminders) and produce and schedule the company's social media content.
- Audited the app for security and data integrity and shipped the fixes in staged, verified releases.

Junior Software Engineer *May 2025 – Sep 2025*

Onify Tech · Bangkok, Thailand · promoted from Software Developer Intern (Jan 2025 – May 2025)

Asset Wins — customer-facing mobile and web app for asset management (FlutterFlow)

- Designed and built secure RESTful backend APIs in C# and .NET.
- Used OpenAI APIs to turn PDFs, CSVs and images into structured, machine-readable data.
- Led Android and iOS production releases: build configuration, release pipelines and cross-platform compatibility.

Beny — the company's internal platform

- Built Next.js, React and Mantine web apps in TypeScript with Supabase authentication, authorisation and real-time data.
- Documented and tested APIs with Swagger, worked in Agile sprints with Git branches, pull-request reviews and CI/CD builds, and contributed to the company website (onifytech.com).

PROJECTS

Event ticketing and registration websites *Sep 2026 – Present*

Rev 22 Global Energia · healthtalk-rev22energia.vercel.app

- Sites for the company's October celebration (19–20 Oct 2026) and its Thanksgiving Month health seminar (23–24 Nov 2026), built with React and TypeScript on Vercel. HitPay orders and free sign-ups go through Supabase Edge Functions into the operations platform as invoices, customer records and guest lists, and sync to Google Sheets.

GO GO TRIP — family travel-planning website *May 2025 – Present*

Personal project · gogotrip.vercel.app

- Bilingual (English and Burmese) site with ready-made Southeast Asia trip plans and booking links, visa-free rules for Myanmar passport holders, travel guides, a custom-planning request form and a private admin area. React 19, TypeScript, Vite, Tailwind CSS and Supabase (PostgreSQL, sign-in, image storage).

Academic projects

- Java mobile apps (Sudoku, Minesweeper, Calculator); PHP, HTML and CSS content-management websites; Tableau and Weka data-analysis projects.

EDUCATION

Postgraduate Diploma in Management *Nov 2025 – Jun 2026*

AceTek College · Singapore

Bachelor of Information Technology with Distinction *2022 – 2024*

James Cook University Singapore · conferred June 2024 · GPA 6.04 / 7.00

High Distinctions: Database Modelling; Information Security; Introductory Machine Learning and Data Science; Multidisciplinary Project; Design Thinking III; Collective Intelligence and Entrepreneurship; Preparatory Mathematics (Book Prize, top scorer); Accounting for Decision Making; Principles of Data Analysis for Business.

SKILLS

Languages: TypeScript, JavaScript, SQL, C#, Python, Java, C++, PHP

Front end: React, Next.js, Vite, Tailwind CSS, Mantine, FlutterFlow

Back end & data: PostgreSQL (functions, triggers, row-level security), Supabase (Auth, Edge Functions, Storage), Node.js, .NET, MySQL, REST APIs, webhooks

Tools & practices: Git and GitHub, Vercel, Docker, Swagger, Jira, Claude Code, automated testing, database migrations, Agile/Scrum, CI/CD

Integrations: OpenAI API, Google Sheets API, HitPay, cal.com, TikTok Shop, Xero (export)

CERTIFICATIONS, AWARDS & LANGUAGES

- IELTS Academic, Overall Band 7.0 (CEFR C1), March 2025
- Google Advanced Data Analytics courses (Coursera, 2024): Foundations of Data Science; Get Started with Python; Go Beyond the Numbers; The Power of Statistics; Capstone
- Gold medals, Thailand International Mathematical Olympiad (TIMO) and Southeast Asian Mathematical Olympiad (SEAMO), 2019; Top 15 nationally, Myanmar National Mathematics Olympiad (Grade 10), 2019
- Languages: Burmese (native), English (full professional)
